UPDATE YOUR DEVICES!

Updates are one of the strongest defences in your security toolkit

Updating your device and applications can fix issues and address new security concerns. Updates can also add new features to your app or device.

Updates are new, improved, or fixed versions of software

Regular updates are critical in maintaining a secure system. It's important to check for any updates and make sure that automatic updates are switched on.

Cyber criminals hack devices by using known weaknesses in systems or apps. Updates have security upgrades to fix these weaknesses. You can turn on automatic updates so that this happens without your input.
